

A Safe and Effective New Way to Treat Cancer in Pets

A cancer diagnosis is heart-wrenching news to receive. But it doesn't have to be hopeless. New technology is transforming the options available to pets with cancer, and PetCure Oncology is bringing them to a veterinary specialty center near you.

Ask your veterinarian about **stereotactic radiation (SRS/SRT)**. This advanced form of radiation therapy has been extremely effective in treating humans with cancer, and it is now available to pets. The benefits of SRS/SRT include just 1-3 treatment sessions, a non-surgical procedure, and minimal side effects. PetCure Oncology is teaming up with specialty practices across the country to make SRS/SRT available to pets everywhere.

What is SRS/SRT?

SRS/SRT is a non-surgical treatment in which high doses of precisely targeted radiation are delivered to shrink or destroy a cancerous tumor... with minimal collateral damage to nearby healthy tissue. This breakthrough technology is making an enormous difference in the lives of pets and their families.

About PetCure Oncology

PetCure Oncology is revolutionizing cancer care for pets by providing greater access to SRS/SRT, a potentially curative form of advanced radiation therapy. With the largest network of affiliated board-certified veterinary radiation oncologists in the world and a telehealth platform that can reach pet families wherever they are, PetCure's affiliated network is setting the standard for advanced cancer care for pets.

If your pet has been diagnosed with cancer, our team of Pet Advocates are standing by to help.

SRS/SRT

*Stereotactic radiation (SRS/SRT) is changing the way we approach cancer care for pets. This new treatment option requires fewer treatment sessions and results in fewer side effects than conventional radiation therapy. In some cases, it can even be delivered with the intent to **cure**.*

The partnerships that PetCure Oncology supports across the country offer veterinarians and pet owners comprehensive cancer care that includes the most advanced treatment options available.

When it comes to increased survival time and quality of life, we are certain you will find new reasons to hope.

We understand. We commit. We will help.
